

3M™ Premium Clear Masking Film 80139

- Premium formulation minimises the risk of marking on damp vehicles
- Translucent purple film maintains visibility of the repair area
- Fold pattern enables easy application by one person

3M™ Premium Clear Masking Film 80139

Premium Clear Masking Film is a high-density polyethylene sheeting designed for the prevention of overspray damage during a repair. Special surface treatments ensure excellent adhesion of paint to the film around the repair area, and eliminate the need for additional paper masking, as well as the risk of paint 'flaking' on removal.

New Premium Clear Masking Film 80139 uses advanced technology that minimises the risk of imprint marking or 'ghosting' when used to mask damp vehicles.

Inset picture shows the ghosting effect that can occur with normal film in damp conditions

The translucent purple colour makes the repair area highly visible for simple trim guidance. Because the film is easy to cut the required area can be removed with maximum speed and accuracy, and finished efficiently with narrow masking tape.

The static cling properties of the film, and its 4 metre width (folded to 1 metre on the mobile dispenser) allow a rapid, one person application.

The static cling holds every contour of the vehicle to eliminate overspray reaching the vehicle under the film.

Instructions for use

Position the dispenser horizontally at either end of the vehicle and pull the film sheeting from the bottom of the roll centrally along the car. From beside the car, reach underneath to the fold and pull out edge of the sheeting to cover the car.

A triangular 3M logo is printed along the centre of the sheeting to provide an accurate positional guide. To ensure that the treated side of the film is facing outward to take the paint overspray, the 3M logo should read correctly and should not be reversed. The triangle logo design allows assessment of correct placement from any angle.
